CONTENTS

A Complexity-Level Analysis of the Sensor Planning Task for Object Search 605
Yiming Ye and John K. Tsotsos

Control States and Complete Agent Architectures 621
Dr. Darryl N. Davis

Semantic Forcing in Disjunctive Logic Programs 651
Marina De Vos and Dirk Vermeir

Discovering Maximal Generalized Decision Rules Through Horizontal and Vertical Data Reduction 685
Xiaohua Hu and Nick Cercone

Granularity in Relational Formalisms—With Application to Time and Space Representation 703
Jérôme Euzenat

Social Mental Shaping: Modelling the Impact of Sociality on the Mental States of Autonomous Agents 738
Pietro Panzarasa, Nicholas R. Jennings, and Timothy J. Norman

A Pattern-Weight Formulation of Search Knowledge 783
Robert Levinson and Gil Fuchs

Letter to the Editor of Computational Intelligence: Issues Concerning Kohanim and Johnson’s “Using Images as a Foundation for Natural Language Processing” (Nov. 2000) 812
Tracy C. Mansfield
INSTRUCTIONS FOR CONTRIBUTORS

Computational Intelligence publishes high-quality original theoretical or experimental research in computational (artificial) intelligence. To facilitate publication, authors must check symbols, abbreviations, and technical terms for accuracy, consistency, and readability. Manuscripts and illustrations must meet the requirements outlined below; otherwise publication might be delayed. Authors are charged for excessive changes in page proofs.

Webster's Third New International Dictionary should be used as a guide for spelling. Style, arrangements, or abbreviations should conform in general to those recommended by The Chicago Manual of Style. The International System of Units (SI) should be used when appropriate. Equivalents in other units may be given in parentheses. Superscripts and subscripts should be legible and appropriately placed, and unusual and Greek characters identified clearly.

THE MANUSCRIPT

An original and three copies of the manuscript, consisting of title page, abstract, key words, main body of the text, acknowledgments (optional), references, appendices, list of symbols, tables, list of figure captions, and figures should be submitted. The manuscript, including references, footnotes, tables, and captions for illustrations, should be typewritten, double-spaced, on paper 8½ × 11 with 1 inch margins. Typing should be on one side of the page only. Each page of the manuscript should be numbered, beginning with the title page. Items to be included are enumerated as follows:

Title Page—This should specify the title, authors’ names, institution of origin, and its address (including postal code) phone/fax number(s), and an unnumbered footnote detailing a correspondence address and e-mail.

Abstract—An abstract (excluding key words) should be not more than 200 words, and on a separate page. The concise abstract should present the paper content accurately and should supplement, not duplicate, the title in this respect; it should not be merely an expansion of the table of contents. References should not be cited in the abstract.

Key words—These should not exceed ten (10) and should be placed directly below the abstract.

Footnotes—These should be located on the page where they are referenced and numbered serially throughout the paper.

References—References should be cited in parentheses in the text, by authors' last names and year of publication, e.g., “Previous studies (Minsky 1974; Schank 1976) indicate that the results of Winograd (1970) are …” All citations should be listed in the references section unnumbered, alphabetically by authors’ names, with the first author’s name inverted, in the format: AUTHOR, A. B., and C. D. COAUTHOR. 20XX. Chapter title or article in a proceedings. In Title of Book or Proceedings. Publisher Name, City, ST, pp. XX–XX.

All reference information should be double-spaced and written out in full, using no abbreviations beyond the authors' initials. Refer to current issues of the journal as a guide to punctuation and to the style used for listing references to journals, books, conference proceedings, theses, etc. References to unpublished reports and to private communications should be given in parentheses in the text or in footnotes; for a private communication, authors' initials and year of communication should be given.

Equations and formulae—Equations and formulae must be set up clearly and should be typed triple-spaced. Numbers identifying equations should be in parentheses and placed flush with the right margin of the text.

Tables—Tables should be numbered with Arabic numbers, have a brief title, and be referred to in the text. Column headings and descriptive matter in tables should be brief. Vertical rules should not be used. Numerous small tables should be avoided, and the number of tables should be kept to a minimum.

Figure captions—These should be listed on a separate page and placed after the references.

Acknowledgments—These should be written in the third person and kept to a concise recognition of relevant contributions.

Copyrighted material—If a manuscript contains material (figures, tables, etc.) that is protected by copyright, the author must submit to the editor, before publication, written permission from the copyright holder for its reproduction.

ILLUSTRATIONS

All terms, abbreviations, and symbols in illustrations should correspond with those in the text. All artwork must be in final form and camera-ready. The illustrations (including figures for plates) should be numbered consecutively in Arabic numbers, and each one should be referred to in the text. For identification, the authors’ names, title of the paper, and figure number should be written in the lower left corner of each illustration.

Line drawings—Drawings should be made with black ink on quality white paper. Any coordinate lines to appear should be ruled in. All lines must be sufficiently thick to reproduce well, and decimal points, periods, dots, etc., must be large enough to allow for any necessary reduction. Letters and numerals should be made neatly with a printing device (not a typewriter) and be of such size that the smallest character will not be less than 1 mm high when reduced.

Computer-generated output—Computer-generated typescript is acceptable provided it is good quality and can be reproduced satisfactorily. Computer-generated graphics are acceptable provided they are in black and the lines and lettering are clear, dark and large enough to permit size reduction without loss of detail.

Photographs—Prints should be made on glossy paper with strong contrasts, and should be trimmed to show only essential features. Photographs should be submitted in triplicate for review purposes.

PAGE PROOFS

Page proofs are provided for the correction of printing errors and not for improvements in the language or substance of the paper. Corrected proofs should be returned within 48 hours of receipt. The cost of changes introduced by the author(s) and deemed to be excessive will be charged to the author(s).

OFFPRINTS

An offprint order form is sent along with page proofs; an author should complete the form and submit it to the proofreader at the same time as the proofs are returned. All offprint orders must be prepaid, and returned along with corrected proofs or orders will not be fulfilled. Offprints are shipped by the printer one week after the relevant issue of the journal is published. Computational Intelligence does not provide free offprints.
