

CONFLICT OF INTEREST

Conflicts of interest, whether apparent or real, raise doubt as to the credibility of the data reported. Consequently, all potential conflicts of interest relating to the manuscript content, preparation, or funding should be reported by the authors to allow the readers to place their report in perspective. Potential conflicts include: financial interests in the manuscript; funding support; and affiliations or financial involvement with an entity having financial interest or conflict relating to the material presented in the manuscript. These relationships include, but are not limited to, employment, consul-

tancy, honoraria, stock ownership, grant support, paid expert testimony, patents, royalties, and payments for participation in manuscript preparation. Relationships without direct bearing on the manuscript submitted that have been inactive for 5 years or longer need not be reported. Direct sponsorship must always be disclosed, regardless of the passage of time.

Peer reviewers are also required to complete a Conflict of Interest Statement that is specific to the manuscript under consideration.
