## A Course in Monetary Economics

Sequential Trade, Money, and Uncertainty

**BENJAMIN EDEN**

Vanderbilt University and the University of Haifa

**A COURSE IN MONETARY ECONOMICS** is an insightful introduction to advanced topics in monetary economics. Accessible to students who have mastered the diagrammatic tools of economics, it discusses real issues with a variety of modeling alternatives, allowing for a direct comparison of the implications of the different models. The exposition is clear and logical, providing a solid foundation in monetary

theory and the techniques of economic modeling. The text is rooted in the author's years of teaching and research, and will be highly suitable for monetary economics courses at both the upper-level undergraduate and graduate levels.

## On Ethics and Economics

**AMARTYA SEN**

Harvard University

*"Sen is one of the true pioneers in modern economics. He has, in effect, created a new branch of the subject... which might one day change mainstream economics beyond recognition."*

THE ECONOMIST

In this elegant critique, Amartya Sen argues that a closer contact between welfare economics and modern ethical studies can substantively enrich and benefit both disciplines. He argues further that even predictive and descriptive economics can be helped by making more room for welfare economic considerations in the explanation of behavior, especially in production relations, which inevitably involve problems of cooperation as well as conflict.

## Inside the Economist's Mind

Conversations with Eminent Economists

**Edited by PAUL A. SAMUELSON & WILLIAM A. BARNETT**

Massachusetts Institute of Technology; University of Kansas

*"In candid interviews, these great economists prove to be fabulous storytellers of their lives and times. Unendingly gripping for insiders, this book should also help non-specialists understand how economists think."*

JULIO ROTEMBERG, HARVARD UNIVERSITY BUSINESS SCHOOL

*"Histories of economic analysis abound, but if you want an insider view of how economics has been developing in the last decades, this is the (only) book for you."*

GIANCARLO GANDOLFO, UNIVERSITY OF ROME

*"Economics has made swift progress in the past few decades and its role in policy-making has radically increased. The interviews of many of the most prominent researchers and policy-makers offer a unique insider view of these developments. This book is fascinating reading to anyone interested in contemporary economics and its role in modern societies."*

SEPPON HONKAPOHJA, UNIVERSITY OF CAMBRIDGE

By focusing on the human side as well as the intellectual dimensions of how economists work and think, this collection of interviews with top economists of the twentieth century becomes a startling and lively introduction to the modern world of macroeconomics.

Institutional and Behavioral Economics

A. ALLAN SCHMID

*Michigan State University*

*"A refreshing alternative to outdated microeconomics texts that endlessly parrot supply and demand, this book offers an analytically sharp, comprehensible, yet accessible guide to the new approaches that are rapidly transforming economics as a discipline."*

NANCY FOLBRE, UNIVERSITY OF MASSACHUSETTS

This innovative text, investigates 'the rules of the game', how institutions—both formal and informal—affect these rules, and how these rules are changed to serve competing interests. An economic framework emerges, acknowledging human learning and preference change, bounded rationality, and disequilibrium.

# Computability, Complexity and Constructivity in Economic Analysis

Edited by **VELA VELUPILLAI**

National University of Ireland, Galway

This cutting-edge collection of essays develops an economic theory based on the mathematics of the digital computer. It proposes a wholly different mathematical foundation for economic theory and applied economics,

providing explicit formalizations and applications to traditional issues in economic analysis. The collection is ideally suited for graduate courses on economic theory, macroeconomic and microeconomic theory and mathematical economics.

# Meta-Regression Analysis

Issues of Publication Bias in Economics

Edited by **COLIN J. ROBERTS & T. D. STANLEY**

University of Edinburgh; Hendrix College

Celebrating this innovative and rapidly growing area of economic research, this book develops methods which help researchers to distinguish publication selection from genuine empirical effect. It then applies these methods to topical areas of economic

research, helping to bridge the gulf between economic theory and practice.

## Economics of Gender

Third Edition

**JOYCE P. JACOBSEN**

*Wesleyan University*

What role does gender play in relation to economic opportunities, activities, and rewards? **THE ECONOMICS OF GENDER** offers a comprehensive, balanced, and up-to-date introduction to this important topic in labor economics. With a strong focus on US patterns, but utilizing an international comparative perspective, this text closely examines the evolution of these frameworks, and analyzes the ways in which they are impacted by race, ethnicity, and class. Real-life examples and anecdotes enliven the text as it encompasses crucial topics for a thorough understanding of the field, including the pros and cons of various policies, such as 'comparable worth' and welfare programs. Helpful appendices provide additional information for readers who have little experience with economics, while simultaneously providing further detail for the economically sophisticated.

Clear, readable, and provocative, the third edition of **THE ECONOMICS OF GENDER** is an essential resource for the growing number of courses on gender economics, labor economics, economic policy, and women's studies.

## Labor Markets and Employment Relationships

A Comprehensive Approach

**JOYCE P. JACOBSEN & GILBERT L. SKILLMAN**

*Both Wesleyan University*

This innovative text grounds the economic analysis of labor markets and employment relationships in a unified theoretical treatment of labor exchange conditions. In addition to providing thorough coverage of standard topics including labor supply and demand, human capital theory, and compensating wage differentials, the text draws on game theory and the economics of information to study the implications of key departures from perfectly competitive labor market conditions. Analytical results are consistently applied to contemporary policy issues and empirical debates.

The text is supplemented by text boxes that illustrate key concepts with real-world applications, chapter appendices that explore technical material in greater depth, and end-of-chapter study questions that encourage students to apply, extend, and critically evaluate the theories under study.

## Life's Work

Geographies of Social Reproduction

Edited by **KATHARYNE MITCHELL, SALLIE A. MARSTON & CINDI KATZ**

*University of Washington; University of Arizona, Tucson; Graduate Center, CUNY*

**LIFE'S WORK** is a study of the shifting spaces and material practices of social reproduction in the global era. The volume blurs the heavily drawn boundaries between production and reproduction, showing through case studies of migration, education and domesticity how the practices of everyday life challenge these categorical distinctions.

## NEW EDITION

**Managerial Economics**

Third Edition

**IVAN PNG & DALE LEHMAN**

*National University of Singapore; Alaska Pacific University*

Now in its third edition, this highly readable, non-technical introduction to the essential microeconomic principles needed by business managers retains its global focus and economic rigor, and has been extensively updated and rewritten to include new and recent cases and examples from a multitude of countries and economic systems, applied to managerial situations.

Written for managers rather than economists, this text uses mathematics strictly where it is absolutely necessary. This edition includes international "mini-cases" at the beginning of each chapter, offers an expanded analysis of organizational boundaries and architecture, new coverage of oligopoly, the time value of money, and R&D, and adds a Wiki site where users may post their favorite examples. Please see <http://www.comp.nus.edu.sg/~ipng/mecon.htm/> and <http://polar.alaskapacific.edu/dlehman/>

Distinctively focused economic reasoning on various managerial functions, including accounting, finance, human resources, and marketing, *Managerial Economics, 3e* teaches students and managers how to employ microeconomics to be better managers and leaders. The book employs a simple, pedagogic model, providing the most up-to-date and relevant information in the field, and is priced affordably for students.

**Macroeconomics for Managers**

**MICHAEL K. EVANS**

*Northwestern University*

This text offers business managers and business school students an excellent practical explanation of the short-term linkages that impact the performance of the overall economy. While the underlying theoretical constructs are not ignored, emphasis is placed on the empirical underpinnings and managerial implications of macroeconomics.

The text includes detailed case studies and 'Manager's Briefcase' discussions, which provide practical applications of macroeconomic concepts to real-world situations. Additionally, each chapter ends with a list of key concepts, a chapter summary, and practice questions.

# Working the Spaces of Neoliberalism

Activism, Professionalisation and Incorporation

Edited by **NINA LAURIE & LIZ BONDI**

University of Newcastle; University of Edinburgh

Drawing on global research, this book argues that processes of professionalisation form an integral part of the production of neoliberal spaces, with profound implications for political activism. It brings together original research from diverse contexts in order to enable key features of neoliberalisation to be understood more fully.

# Twilight Institutions

Public Authority and Local Politics in Africa

Edited by **CHRISTIAN LUND**

Roskilde University

State and society are powerful concepts, but actual public institutions in Africa defy clear-cut distinctions. Questions of citizenship, property and security are not the preserve of the state. While formal government is often weak and sometimes failing, public authority is dislocated to, or appropriated by, other institutions that endeavour to act as the state. Focusing on the condition of public authority in Africa, **TWILIGHT INSTITUTIONS** investigates how a range of institutions seek voluntary compliance to their authority, and claim legitimacy in an attempt to govern.

**Urban Economics and Real Estate**

Theory and Policy

JOHN F. McDONALD &amp; DANIEL P. McMILLEN

*Both University of Illinois at Chicago*

Unique in its coverage, **URBAN ECONOMICS AND REAL ESTATE** allows an instructor to teach separate courses in either urban economics or urban real estate, or a blend of the two topics. The portion on urban economics focuses on urban/suburban growth—physical as well as job growth. The interplay of federal government and local authorities is discussed. While the latest data sets available are utilized, the emphasis is on economic analysis. The real estate chapters emphasize housing markets, appraisal, business investments, and their relationship to finance. Given the rapidly changing empirical side of urban demography, the text is accompanied by a website with new examples added annually and various discussions about the latest data sets that become available. Website available at <http://www.uic.edu/~mcmillen>.

## Games and Information

An Introduction to Game Theory  
Fourth Edition

**ERIC RASMUSEN**

Indiana University

What may be the most successful introductory game theory textbook ever written is now available in its fourth edition. The many editions since it was first published in 1989 allow a highly polished presentation, with incisive problem sets and applications.

Written in a crisp and approachable style, **GAMES AND INFORMATION** uses simple modeling techniques and straightforward explanations to provide students with an understanding of game theory and information economics. The fourth edition brings this material totally up-to-date, and includes new end-of-chapter problems and classroom games, a math appendix, and is accompanied by a comprehensive website featuring solutions to problems and teaching notes, available at [www.rasmusen.org/GI](http://www.rasmusen.org/GI).

With its emphasis on applications of game theory and information economics to a vast array of disciplines, **GAMES AND INFORMATION** provides an accessible first course for students of diverse backgrounds: those in economics, business, mathematics, and political science.

## Mathematical Tools for Economics

**DARRELL TURKINGTON**

University of Western Australia

With many expensive and lengthy mathematics texts for students of economics on the market, Turkington's text provides an affordable, short, and accessible alternative for those requiring an intermediate, semester-length treatment. The focus is on the topic of optimization—both static and dynamic. The essential matrix algebra and differential equations are also covered.

Designed to demonstrate the essential mathematical concepts comprehensively and economically without re-teaching basic material or laboring over superfluous ideas, this text locates the necessary information in a practical economics context. Utilizing clear exposition and dynamic pedagogical features, **MATHEMATICAL TOOLS FOR ECONOMICS** provides students with the analytical skills they need to better grasp their field of study. Instructor's manual available.

## Mathematics for Economics and Business

An Interactive Introduction

Second Edition

**JEAN SOPER**

University of Leicester

This text offers the ideal approach for economics and business students seeking to understand the mathematics relevant to them.

Each chapter demonstrates basic mathematical techniques, while also explaining the economic analysis and business context where each is used. By following the worked examples and tackling the practice problems, students will discover how to use and apply each of these techniques.

Now in its second edition, the text features expanded summaries of economic analysis, new sections on matrix algebra and linear programming, and additional demonstrations of economics applications.

Although the book is complete in itself, it also encourages students to develop their understanding of both mathematics and economics by using the interactive CD-ROM in the back of the book. This CD-ROM includes the award-winning MathEcon software, Excel files, Powerpoint slides, all definitions and 'remember' boxes, and additional practice questions. In its flexibility, comprehensiveness, and readable format, this text will continue to serve as an essential resource for students in this area.

## A Guide to Econometrics

Fifth Edition

PETER KENNEDY

Simon Fraser University

**A GUIDE TO ECONOMETRICS** has established itself as the preferred text for teachers and students throughout the world. It provides an overview of the subject and an intuitive feel for its concepts and techniques without the notation and technical detail that characterize most econometrics textbooks.

The fifth edition includes:

- ▣ Two new and innovative chapters on panel data and applied econometrics
- ▣ Extensive revisions and updates to existing chapters
- ▣ Additional new exercises have been added, some of which form new sections on bootstrapping and on applied econometrics.
- ▣ This classic textbook is supported by lecturer resource website at [www.blackwellpublishing.com/kennedy](http://www.blackwellpublishing.com/kennedy)

*Graduate students in economics will find it highly accessible. Practitioners steeped in classical econometric methods will find much that is new, exciting, and useful here as well."*

JOHN GEWEKE, UNIVERSITY OF IOWA

In this new and expanding area, Tony Lancaster's text provides a comprehensive introduction to the Bayesian way of doing applied economics. Using clear explanations and practical illustrations and problems, the text presents innovative, computer-intensive ways for applied economists to use the Bayesian method. In addition, each chapter includes numerical and graphical examples and demonstrates their solutions using the S programming language and Bugs software.

## The Russian Economy

From Lenin to Putin

STEVEN ROSEFIELDE

University of North Carolina at Chapel Hill

The epic tale of the Soviet Union's quest to construct a socialist economy was, until recently, the principal motif of textbooks on the Russian economy. Traditional Soviet and post-Soviet books usually adopt an historical approach, exploiting the dichotomies between socialism and capitalism as a convenient device for highlighting the differences in Soviet and western arrangements. These conventions remain useful, but require refurbishing.

Rosefielde's new text offers a more sober recounting of the Bolshevik saga, stripped bare of socialist romanticism, and focused equally on the micro- and macroeconomics of administrative command planning as well as Russia's post-Communist market system.

Understanding the Soviet economic system and the causes of its failure are central to any student's study of Russia's struggle towards a market economy and its prospects for the future.

## Political Economy

DANIEL USHER

*Queen's University, Ontario, Canada*

This thought-provoking introduction to economics exposes readers to the workings of the market in a democratic state. The text explains basic economic concepts from a political perspective; how the price mechanism substitutes for central authority in determining production and allocation of goods; the use of demand and supply curves to trace the impacts of tariffs, taxes, subsidies, quotas, and patents; and the

redistribution of income. Additionally the text explores political topics from an economic perspective, including the avoidance of anarchy and despotism; and the mutual dependence of markets, voting, public administration, and law.

Assuming no prior background in economics or calculus, the text relies largely on simple stories and paradigms to convey important economic concepts, preparing the student for more advanced courses and applying the lessons of economics for the citizen in a modern democratic society.

## Saving Globalization from Itself

GUILLERMO DE LA DEHESA

Centre for Economic Policy Research

The book examines the two fundamental arguments that are often raised against globalization: that it produces inequality and that it increases poverty. Here Guillermo de la Dehesa, current Chairman of the Centre for Economic Policy Research, demonstrates how despite popular belief, acceleration of globalization actually stands to reduce the levels of poverty and inequality worldwide and explains, in detail, the ways in which wealthy nations and developing countries alike have failed to implement changes that would result in a reversal of these social ills.

Dehesa dispels the notion of the so-called 'victim of globalization' and poses the question: could increased technological, economic, and cultural change actually save the world from international income inequality; and by extension, further violence, terrorism, and war?

## The Dirty Work of Neoliberalism

Cleaners in the Global Economy

Edited by LUIS L. M. AGUIAR &amp; ANDREW HEROD

University of British Columbia, Okanagan; University of Georgia

Building cleaners are being affected tremendously by neoliberalism's grip on the reorganization of contemporary work and labor markets. In this collection of essays, an international group of scholars investigates the global building cleaning industry to reveal the extent of neoliberalism's impact on cleaners.

## Winners and Losers in Globalization

GUILLERMO DE LA DEHESA

Centre for Economic Policy Research

*"I don't expect this book to settle the debates over globalization: there is too much real uncertainty about the issue, and anyway there are too many*

*people firmly committed to their views to be shaken by any argument or evidence. But perhaps Mr. De la Dehesa's excellent book can lower the temperature and give us all a better sense of what this new global economy is really all about."*

PAUL KRUGMAN, FROM THE FOREWORD TO WINNERS AND LOSERS IN GLOBALIZATION

Is globalization a limitless source of benefit to humanity? Or is it responsible for the increasing gap between wealthy and poor nations, job flight and a host of other ills? How can the positive results of globalization be shared more broadly and any negative effects be minimized?

Guillermo de la Dehesa offers an objective and dispassionate analysis of the emotionally charged globalization debate, detailing the economic effects of globalization on individuals, governments, nation states and businesses.

Seeking reason in this impassioned debate, de la Dehesa examines who stands to win and who stands to lose from the process of globalization, in a style accessible to readers unfamiliar with economic theory.

## The World Food Economy

DOUGLAS SOUTHGATE, DOUGLAS H. GRAHAM  
& LUTHER TWEETEN

All Ohio State University

The questions of population growth and food supply have long been of central concern to economists. The **WORLD FOOD ECONOMY** seeks to examine the lessons of the past for wealthy nations, where agricultural output has steadily risen for decades, as well as for developing nations where the advances of the 'Green Revolution' in the 1960s have introduced new problems in addition to solutions. This book assesses the challenge of satisfying food demand during the twenty-first century as consumers and producers in every part of the world - rich and poor alike - feel the effects of expanded global commodity trade, food aide, and national legislation in response to globalization. The difficulties of developing agriculture in the Third World are discussed in the context of food subsidies in Europe and the US.

## The Contested Commons

Conversations Between Economists and Anthropologists

Edited by PRANAB BARDHAN & ISHA RAY

Both University of California, Berkeley

Interdisciplinary work in the social sciences is challenging. While similar in their research themes, the large variance in the histories and methods of different disciplines tends to hinder constructive communication. **THE CONTESTED COMMONS** explores the theme of common environmental resources from the perspective of two disciplines that are often considered to be far apart: economics and anthropology.

Written by senior scholars in economics, anthropology, sociology and political science, this volume focuses on methodological and epistemological approaches to the analysis of local common pool resources. This is a topic that touches upon economic security, ecological sustainability, identity formation, and participatory decision-making- particularly in the developing world. The essays in this volume illustrate the wide variation in approaches to research itself, both across and within economics and anthropology.

## Agricultural Markets and Prices

**DARREN HUDSON**  
Mississippi State University

Agricultural markets have changed rapidly in recent years, and there is a critical need to train students to work in the new world of agricultural markets. This new text addresses these new emerging issues, incorporating new information and devoting more time to the issues of agricultural industrialization and market structure likely to be faced by applied economists. It includes more examples and case studies and covers issues in regression analysis and empiricism in a far greater way than other books at this level. Each chapter offers practical examples used to make key points, 'key questions' for review purposes, exercises, and questions posed to students that can be used by instructors to stimulate classroom discussion.

The IMMPA Framework

Edited by **PIERRE-RICHARD AGENOR,**  
**ALEJANDRO IZQUIERDO & HENNING**  
**TARP JENSEN**

University of Manchester; Inter-American Development Bank; University of Copenhagen

Pierre-Richard Agenor's pioneering work on Integrated Macroeconomics Models for Poverty Analysis (IMMPAs) is cataloged for the first time in this must-read volume.

A class of Computable General Equilibrium models, IMMPAs are designed to analyze the impact of adjustment policies on unemployment figures and poverty, particularly in the developing world. Including both working papers originally circulated through the World Bank, as well as new material that places this important work in its larger context, **ADJUSTMENT POLICIES, POVERTY AND UNEMPLOYMENT** details the history and uses of these models to date, as well as pointing to future developments for their utilization.

## Foundations of Behavioral Finance

Edited by **WERNER F. M. DE BOND**T

*DePaul University*

As a field, behavioral finance has experienced a surge of interest in recent years. In large part, this is because behavioral finance supports what students can observe with their own eyes: that financial decisions, despite theories on 'efficient markets' and 'random walks', are fundamentally about choices made by individuals and institutions, and that these choices can be as irrational as others we might make.

Designed for instructors looking to teach concepts of behavioral finance to their students on an MBA or undergraduate level, the **FOUNDATIONS OF BEHAVIORAL FINANCE** contains seminal writings from the development of the field, chosen specifically for their accessibility to a non-specialist audience. Starting with excerpts from the works of Gustav Le Bon (*The Crowd: A Study of the Popular Mind*) and John Maynard Keynes (*The General Theory of Employment, Interest, and Money*), through ground-breaking work by Nobel-Prize winners Tversky and Kahneman, and incorporating cutting-edge articles in the field, DeBondt draws from landmark works in both finance and psychology to demonstrate how human and often irrational choices affect financial decisions and market behavior.

**MODERN FINANCIAL MACROECONOMICS** examines the role that financial markets and financial institutions play in modern macroeconomics, particularly focusing on the causes of recessions and depressions in the US and internationally. The volume offers:

- A comprehensive, non-technical look at the role of financial markets and institutions on modern macroeconomics
- A review of historical and contemporary macroeconomic theory
- An examination of governmental influence on moderating (or exacerbating) economic fluctuations
- A discussion of both empirical and theoretical links between financial systems and economic performance, as well as case studies detailing the role of finance in specific business cycle episodes.

**STAVROS ZENIOS**

*University of Cyprus and University of Pennsylvania*

This book gives a comprehensive account of financial optimization models used to support decision-making for financial engineers. It starts with the classical static mean-variance analysis and portfolio immunization, moves on to scenario-based models, and builds towards multi-period dynamic portfolio optimization. Once the foundations are laid with several building blocks, and the broad landscape of financial optimization is charted, the book moves on to analyze several real-world applications. In this way the reader acquires not only solid knowledge of the foundations of financial optimization, but also a taste for the large-scale models that can be grounded on these foundations.

## KEY TEXTBOOK

## Finance and the Economics of Uncertainty

GABRIELLE DEMANGE & GUY LAROQUE

DELTA, Paris; INSEE-CREST

**FINANCE AND THE ECONOMICS OF UNCERTAINTY** explores the growing range of economic decisions that are conducted under uncertainty both on the personal level - with individual savings, insurance, portfolio choices - as well as by large firms including insurance companies, stock exchanges, and futures and derivatives assets that utilize financial tools to facilitate the exchange of risks.

Presenting the basic principles and discussing them in a unified framework within elementary models, this text analyzes the allocation of risk in the context of the current literature, and emphasizes the role of information in decisions and prices. Including end-of-chapter exercises, this book provides students with a tool for understanding the theoretical analysis of decision-making under uncertainty, and its applications to the world of economics and finance.

## FORTHCOMING

## The Future of Banking Regulation

The Basel II Accord

Edited by HARALD A. BENINK, JON DANIELSSON & CHARLES GOODHEART

Erasmus University; London School of Economics; London School of Economics

Banking regulation is a controversial and oft-debated topic in the financial, practical, and political spheres. With the implementation of the Basel II Accord—a new system designed to determine how much capital internationally active banks are required by supervisors to hold against their portfolio of risky assets—fierce debates will continue to emerge as uncertainty and fear of a competitive disadvantage mounts. What can banks expect when the Accord is realized? Some may experience substantial reductions in regulatory capital, and others, with similar risk portfolios, may not face comparable reductions in such capital, thereby impeding their ability to compete.

The Accord inevitably raises numerous competitive and strategic questions, many of which are answered in this unique volume. It brings together the most current thinking on the topic by both leading academic authorities and top-level representatives from the banking and regulatory community, including the prior and current Chairmen of the Basel Committee. **THE FUTURE OF BANKING REGULATION** will prove an indispensable resource to any reader concerned with the ongoing evolution of international finance, law, and economics.

## Risk Management & Insurance

Perspectives in a Global Economy

W. J. KWON & HAROLD D. SKIPPER

St. Johns University; Georgia State University

In an increasingly globalized marketplace, it is undeniable that companies face risks; not only financial risks, but political, environmental, social, and health risks as well. Kwon and Skipper's **GLOBAL RISK MANAGEMENT & INSURANCE** incorporates an international perspective from the outset. The text:

- ▣ Provides students with an in-depth understanding of international risk management and insurance, their dynamics, and the economic, social, political, and regulatory environments surrounding global risk and insurance markets
- ▣ Follows theory with practice
- ▣ Analyzes real-world case studies
- ▣ Explores sound risk management and insurance operations in the future.

Discussion questions and exercise modules help students understand these issues and apply their learning. An accompanying lecturer resource site featuring an Instructors' Manual, PowerPoint slides, and a Test Bank of questions will be available upon publication.

# Futures, Options, and Swaps

Fifth Edition

ROBERT W. KOLB &amp; JAMES OVERDAHL

University of Colorado at Boulder; Commodity Futures Trading Commission

*Of the previous edition:**"the best college textbook I have ever reviewed... every finance professor and practitioner should have a copy because it breaks new ground on several fronts."*

SUK H. KIM, UNIVERSITY OF DETROIT MERCY

Written in an accessible, non-technical style, **FUTURES, OPTIONS AND SWAPS** is the most comprehensive text on derivatives markets available. The only book on the market to utilize such a reader-friendly, instructive approach, students will find the material readily comprehensible without a professor's guidance, thereby freeing instructors to cover only the vital topics or to teach a more technical course. This fifth edition has been extensively revised to address the most recent developments in this rapidly-evolving field. New and updated information reflects current conditions in a variety of areas, including electronic exchanges, exotic options, predictive markets, hedge funds, corporate abuse, and government regulation.
