

Submission of Supplementary Material

In addition to the usual black and white or colour photographs to present data, *EJN* provides the opportunity to publish adjuncts to printed papers via this web site. These may include videos, large data sets, extra colour illustrations, extensive bibliographies, or any other material for which insufficient space in the journal is available. Material replicating the printed paper is not acceptable.

The Editor should be contacted at the time of submission of your paper, and the extra material supplied should ideally be viewable by web browser, and accompanied by a printed copy where possible. Failure to supply material viewable by browser may delay the decision on your paper.

All adjuncts accepted for publication by the Editors and supplied to the Publisher should ideally be viewable by web browser and ready for mounting directly on the web site, as specified below. Failure to supply material viewable by browser may delay the publication of your paper. Subsequent requests for changes are generally unacceptable, as for printed papers. A charge may be levied for this service.

Preparation of supplementary material

Although provision of content through the web in any format is straightforward, supplementary material is best provided either in web-ready form or in a form that can be conveniently converted into one of the standard web publishing formats:

HTML for text. If HTML cannot be supplied, simple word-processing files are acceptable, and can be simply converted by the Publisher.

PDF for more complex, layout-dependent text or page-based material. Acrobat files can be distilled from Postscript by the Publisher, if necessary.

GIF or JPEG for still graphics. Graphics supplied as EPS, PICT or TIFF are also acceptable.

Video footage etc., e.g. MOV or AVI files, will be viewable by those readers with the necessary application. The author should provide site details of any shareware that may be required to view such a file.
