

**FINAL SUBMISSION OF ACCEPTED MANUSCRIPTS**

Final versions of accepted manuscripts are to be submitted via the JMG EEO

1. Submit one file that includes the main text, reference list and figure/table captions – do not submit in pdf format.
2. Submit figures as individual files in the required format (see below).
3. Tables may be submitted as one file or individual files.
4. The main text file should NOT be elaborately formatted using sections, word document styles etc. Do not use headers or footers with page numbers, authors' names or date/time. Also do not use line numbered text, nor have text justification. Particular attention should be paid to the JMG house style in respect of title, authors' names, addresses, headings (follow upper/lower case, bold or italic as appropriate) and also to the reference style, paying specific attention to punctuation. The text should be supplied in single spacing, unjustified format and without end-of-line hyphenation, except in the case of compound words. Failure to provide manuscripts in JMG house style is the main reason for delays in manuscript production.
5. All artwork and halftones should be supplied preferably in TIFF (photographic images) or EPS (line drawings or images with labelling) formats (Do not supply in JPG or GIF formats). All fonts used in the figures should be embedded in the file, and only standard system fonts (Times, Helvetica, Symbol & Courier) used. Note that Symbol should NOT be used in italic or bold form. Please supply images as near as possible to the actual size that you expect they may be printed in the Journal. Pay careful attention to the guidelines given in respect of illustration sizes. Authors are recommended to consult the main Blackwell web site at <http://www.blackwellpublishing.com/authors/digill.asp> for detailed guidance on electronic artwork preparation, and formats to use.
6. Ensure that l (el) and 1, or O (upper case o) and 0 (zero) are correctly used. En rules may be represented using two hyphens (--).
7. Use only one space after punctuation marks (full stops, commas etc).
8. Use the appropriate coding for the designation of bold and italic (do not use the underline mode).
9. Use a Tab key (once only) to indent new paragraphs and not the space bar.
10. Do not use the return to put extra space around headings or between paragraphs.
11. Do not use the return at the end of lines but use the line-wrap facility.

12. Tables can prove very difficult to convert from word processing packages, and there are a number of options that can be used to help with the process. Prepare tables in the simplest format using just the Tab key to separate columns and not by use of the space bar. If you use a table editor function, ensure that each data point is contained within a unique cell, i.e. do not use the return within cells. In addition please supply a copy of the table in RTF format or as an excel file if possible.
